Ralf Deiterding

Curriculum Vitae - April 2024

Contact Information

Title:	Professor of Numerical Methods in Fluid Dynamics
E-mail:	r.deiterding@soton.ac.uk
Web:	http://www.rdeiterding.website
	https://www.southampton.ac.uk/engineering/about/staff/rd1y14.page
Phone:	++44-(0)23-8059-3384 (Work)
	++44-(0)23-8087-9451 (Home)
Fax:	++44-(0)23-8059-3058
Address:	Aerodynamics and Flight Mechanics Research Group
	School of Engineering
	Boldrewood Innovation Campus
	University of Southampton
	Southampton, SO16 7QF, United Kingdom

Areas of research

Fluid dynamics, aerodynamics, hypersonics, high-temperature gas dynamics, shock and explosion dynamics, reactive and multiphase flows, convective heat transfer

Detonation propulsion, rotating detonation engines, air-breathing detonation engines

Computational fluid dynamics and computational engineering, computational aerodynamics, fluid-structure interaction simulation, detonation and combustion simulation, direct numerical simulation, large-eddy simulation

Finite volume and finite difference schemes, lattice Boltzmann methods, level set and Cartesian embedded boundary methods, strand mesh methods, block-structured adaptive mesh refinement, geometric multigrid, split-step Fourier methods, discontinuous Galerkin methods

Scientific computing and numerical analysis, high performance parallel computing, multiscale modeling and simulation

Verification & validation, uncertainty quantification for complex simulations, data assimilation

Object-oriented simulation frameworks, automatic mesh generation and adaption

Education

Ph.D. in Computational Mathematics

Institute of Mathematics, Technical University Cottbus (Germany), Jan. 2004. Grade: "Summa cum laude"

Dissertation: Parallel adaptive simulation of multi-dimensional detonation structures, 280 pages

Advisor: G. Bader. Reporters: D. Kröner and U. Maas. Defense Sep. 2003. '

Diploma in Technomathematics (Computational Engineering)

Institute of Mathematics, Technical University Clausthal (Germany), Jan. 1998 Grade: "Excellent"

Diploma thesis: Numerical coupling of the 3D flow-code FIRE to the 1D hydraulic-code AMESIM for the design of Diesel-injection systems (in German). Advisor: H. J. Pesch

Professional experience

Professor of Numerical Methods in Fluid Dynamics

Aerodynamics and Flight Mechanics Research Group, School of Engineering, University of Southampton, Aug. 2022 - Present

Research in aerodynamics, computational fluid dynamics, detonation propulsion, hypersonics, adaptive lattice Boltzmann and finite volume methods. EPSRC research project leadership. Teaching in fluid dynamics and numerical methods for engineers, undergraduate and post-graduate student project design and supervision, Academic Study Abroad and ERASMUS Officer (Aug. 2015-Jul. 2021), Director of Research (after Aug. 2021)

Associate Professor in Fluid Dynamics

Aerodynamics and Flight Mechanics Research Group, Engineering and the Environment, University of Southampton, Aug. 2015 - Jul. 2022

Adjunct Associate Professor in Mathematics

Department of Mathematics, University of Tennessee Knoxville, Jun. 2010 - Present

Joint Faculty Associate Professor

Center for Interdisciplinary Research and Graduate Education, University of Tennessee Knoxville / Oak Ridge National Laboratory, Sep. 2011 - Aug. 2016 Ph.D. graduate student supervision in Energy Science and Engineering

Group Leader "Computational Fluid Dynamics"

Department Fluid Systems, Institute of Aerodynamics and Flow Technology, German Aerospace Center, Göttingen, Jul. 2013 - Jun. 2015. Department Head: C. Wagner Scientific leadership for a group of 8 staff members plus 7 graduate students. Research in computational fluid dynamics. Development and management of federally funded research projects and contract work. Management of parallel cluster with 5280 cores.

Research & Development Staff and Associate (Computational Scientist)

Computer Science and Mathematics Division, Oak Ridge National Laboratory, Sep. 2006 - Jun. 2013. Supervisor: E. F. d'Azevedo

Research in CFD, fluid-structure coupling, combustion simulation, acoustic simulation, computational photonics, uncertainty quantification, asynchronous iterative schemes.

Development of funded research projects for U.S. Departments of Energy and Defense.

Senior Postdoctoral Scholar in Applied and Comp. Mathematics

California Institute of Technology, Jul. 2003 - Jul. 2006. Sponsor: D. I. Meiron Chief software architect of the "Virtual Test Facility" software for simulating shock-driven fluidstructure interaction, ASC Alliance Center for Simulation of Dynamic Response of Materials. Research in computational fluid dynamics, fluid-structure coupling, detonation simulation.

Research Assistant to G. Bader

Institute of Mathematics, Technical University Cottbus, Feb. 1998 - Jun. 2003 Project: *Analysis and simulation of flows for multi-component gas-mixtures*, supported by German DFG high-priority research program *Analysis and Numerics of Conservation Laws*

Teaching Assistant to G. Bader

Course *Efficient implementation of numerical algorithms in C* Institute of Mathematics, Technical University Cottbus, Apr. - Sep. 2000

Honors and awards

Best paper award: Parallel CFD 2015, May 2015, Montreal, Canada. Computer Science & Math. Division, Most Distinguished Contribution Special Award, 2012 Computing and Computational Science Directorate Distinguished Contributor, 2011 Department of Energy Office of Science Outstanding Mentor Award for 2009 Alston S. Householder Postdoctoral Fellowship in Scientific Computing for 2006 Best Ph.D. dissertation of Technical University Cottbus in 2003

Research funding

- EPSRC and Ministry of Defence for Hypersonics Doctoral Training Partnership, R. Deiterding £250,000 for one PhD studentship on a *Hybrid air-breathing rotating detonation engine*, Sep. 2024 - Aug. 2028.
- UKSA, C. Ryan (PI) and R. Deiterding (CoI) Set up a node of the Rocketry Research, Training and Teaching Hub (R2T2) £330,000 for two PhD studentships, one on a *Modular* rotating detonation engine demonstrator, Sep. 2024 - Aug. 2028.
- EPSRC ARCHER Resource Allocation Panel award, R. Deiterding, Direct Characterisation Of Turbulent Flow Over Fluid-Saturated Complex Porous Media, CPU time equivalent to £69,120, Jan. 2024 - Dec. 2026.
- EPSRC, R. Deiterding (PI) Direct Characterisation Of Turbulent Flow Over Fluid-Saturated Complex Porous Media, £344,938, Jul. 2023 - Dec. 2026.
- 5. Dstl, **R. Deiterding** (PI) and N. Sandham (Col) *Studies of compressible flow over rough surfaces using Direct Numerical Simulation*, **£240,237**, May 2020 Mar. 2022.
- EPSRC ARCHER Resource Allocation Panel award, R. Deiterding, Aerodynamics and aeroacoustics of turbulent flows over and past permeable rough surfaces, CPU time equivalent to £58,425, Jul. 2020 - Jun. 2023.
- EPSRC, B. Ganapathisubramani) (PI) and R. Deiterding (Col), Aerodynamics and aeroacoustics of turbulent flows over and past permeable rough surfaces, £910,574, Apr. 2019 -Dec. 2024.
- EPSRC, Sub-task within programme grant Transpiration Cooling Systems for Jet Engine Turbines and Hypersonic Flight (PI: P. Ireland), (£7,759,059): R. Deiterding (Co-PI), N. Sandham (Co-PI) Direct numerical simulation of transpirational cooling under hypersonic flight conditions, £512,549, Oct. 2016 - Aug. 2022
- FAPESP São Paulo Researchers in International Collaboration and University of Southampton, R. Deiterding (Co-PI) and M. O. Domingues, *Advanced criteria for dynamic mesh adaption in computational space weather forecasting*, grant number 2016/50016-9, £20,000, Aug. 2016 - Jul. 2018
- 10. FAPESP and the Newton Fund, M. O. Domingues and **R. Deiterding**, *Adaptive multiresolution criteria in the AMROC framework applied to a two dimensional ideal magnetohydrodynamic model for space weather*, grant number 2015/50403-0, **£5,000**, Jun. 2016
- Simulation Science Center Clausthal / Göttingen, Ministry of Research and Culture of Lower Saxony: Gunther Brenner (PI), **R. Deiterding** (Co-PI during application, collaborator since moving to Southampton) *Numerically intensive simulations on an integrated compute infrastructure*, €392,850, Oct. 2015 - Sep. 2018
- U. S. Department of Energy Office of Advanced Scientific Computing Research, Applied Mathematics Research Program: R. Archibald (PI), R. Deiterding (Co-PI), C. Hauck (Co-PI), D. Xiu (Co-PI) Advanced Dynamically Adaptive Algorithms for Stochastic Simulations on Extreme Scales, \$1,310,598, Sep. 2010 - Aug. 2013
- 13. Oak Ridge Nat. Lab. Seed Money Program: **R. Deiterding (PI)**, J. Barhen (Co-PI), *Asyn-chronous Algorithms for Exascale Computations*, **\$190,000**, Oct. 2010 Sep. 2012
- U. S. Department of Defense, National Security Agency, Sub-task within Durmstrang Special Projects Program (PI: S. Poole): **R. Deiterding (Co-PI)**, Y. Braiman (Co-PI) *Simulation of pulses in optical fiber networks for achieving Tb/s communication rates*, **\$900,000**, Apr. 2010 - Sep. 2013

- 15. U. S. Department of Energy, Office of Science, Postdoctoral Fellowship, Sep. 2006 Aug. 2008
- 16. German Science Foundation grant Ba 840/3-3 (full position), Apr. 2001 Jun. 2003
- 17. German Science Foundation grants Ba 840/3-1 and 3-2 (half position), Feb. 1998 Mar. 2001

Consulting contracts

- Mills & Co., Solicitors for MSC Mediterranean Shipping Company, S.A. Concerning the fire and explosion aboard the MSC Flaminia at sea on 14th July 2012 (PI: E. Richardson), R. Deiterding portion £10,000, Nov. 2019 - Feb. 2020.
- Samvardhana Motherson Reflectec (SMR), R. Deiterding and B. Ganapathisubramani, Aerodynamical investigation of ECO rearview mirror, £45,000, Jul. - Sep. 2017
- 3. External consultant for Caltech ASC Alliance Center, \$20,000, Jan. Dec. 2007.

Meetings and symposia

Plenary talks

- 1. Parallel adaptive simulation of rotating detonation, *11th Int. Conf. on Eng. Comp. Techn.*, Montpellier, France, Aug. 23, 2022.
- Application of lattice Boltzmann methods for wind turbine wake simulation, *The First Interna*tional Workshop on Lattice Boltzmann for Wind Energy, Rapperswil, Switzerland, Feb. 26, 2021.
- Direct numerical simulation of a hypersonic boundary layer with porous wall injection, *Final colloquium of SFB-TTR40 Technical foundations for the design of spacecraft components under high thermal and mechanical loading*, Munich, Germany, Nov. 17, 2020.
- Third generation computational fluid dynamics: examples of adaptive Cartesian simulations with the AMROC framework, 15th Miklós Iványi International PhD & DLA Symposium, Pecs, Hungary, Oct. 28, 2019.
- Adaptive lattice Boltzmann methods for high-fidelity aerodynamics simulation with moving boundaries, *37rd Brazilian National Congress for Applied and Computational Mathematics*, São José dos Campos, Brazil, Sep. 21, 2017.

- 6. Adaptive high-resolution simulation of transient structures in gaseous detonation waves, *International Symposium of Combustion Instabilities*, Tsinghua University, China, Jan. 5, 2017.
- A massively parallel, dynamically adaptive lattice Boltzmann method for fluid-structure coupling (in German), *HPCN-Workshop 2014*, T-Systems Solutions for Research, Göttingen, Germany, May 13, 2014.
- Parallel adaptive Cartesian upwind methods for shock-driven multiphysics simulation, 33rd Brazilian National Congress for Applied and Computational Mathematics, Águas de Lindóia, Brazil, Sep. 22, 2010.
- 9. Deciphering the structure of gaseous detonations by numerical simulation. 6th Annual Burgers Symposium for Fluid Dynamics, College Park, Nov. 18, 2009.

Invited minisymposia talks

- 10. Large eddy simulation of flows over porous structures with a massively parallel adaptive lattice Boltzmann method method, Keynote in Thematic Session on Exascale Computing, *25th Int. Congress of Theoretical and Applied Mechanics*, Milan (Italy), Aug. 26, 2021.
- 11. Adaptive Cartesian lattice Boltzmann methods in the AMROC framework and comparison with a non-Cartesian approach, Minisymposium on Cartesian CFD Methods for Complex Applications, *9th International Congress on Industrial and Applied Mathematics*, Valencia (Spain), July 16, 2019.
- 12. Implementation of massively parallel hyperbolic multiresolution methods in the block-structured mesh refinement framework AMROC, Minisymposium on Challenges in Parallel Adaptive Mesh Refinement, *SIAM Conf. on Parallel Processing for Scientific Computing*, Tokyo (Japan), Mar. 9, 2018.
- Design and application of wavelet-based refinement criteria for hyperbolic conservation laws within the AMROC mesh adaptation framework, Minisymposim on Application of Wavelets, 37rd Brazilian National Congress for Applied and Computational Mathematics, São José dos Campos (Brazil), Sep. 21, 2017.
- 14. Evaluation of multiresolution mesh adaptation criteria in the AMROC framework. Special session on Adaptive Mesh Refinement Methods on Parallel and Distributed Systems *Int. Conf. on Parallel, Distributed, Grid and Cloud Computing for Engineering*, May 30 31, 2017, Pécs (Hungary).
- 15. Adaptive lattice Boltzmann methods for wind turbine aerodynamics simulation, Minisymposium on Parallel Adaptive Mesh Refinement for Complex Applications, *Int. Conf. on Parallel Comp. Fluid Dynamics*, Glasgow (Scotland), May 15 - 17, 2017.
- 16. A dynamically adaptive lattice Boltzmann method for aerodynamics and wake prediction of fully coupled problems (in German), *Workshop Simulation Science Center Clausthal / Göttingen*, Clausthal (Germany), Nov. 16, 2015.
- A dynamically adaptive lattice Boltzmann method for flapping wing aerodynamics, Aerospace Minisymposium, ASME-JSME-KSME Joint Fluids Engineering Conference 2015, Seoul, Jul. 30, 2015.
- 18. An adaptive parallel lattice Boltzmann method for simulating complex wake transport behind moving geometries (in German), 9th North-German Simulation Forum, Hamburg (Germany), Sep. 18, 2014.
- 19. A block-structured parallel adaptive Lattice-Boltzmann method for rotating geometries, Minisymposium on Challenges in Parallel Adaptive Mesh Refinement, *SIAM Conf. on Parallel Processing for Scientific Computing*, Portland, Feb. 19, 2014.

- Examples of industrially relevant turbulent flow simulation with OpenFOAM, Northern germany OpenFoam User meetiNg 2013, Braunschweig, Oct. 9, 2013.
- Adaptive high-resolution simulation of shock-induced unsteady hydrogen-air combustion, Minisymposium on Detonation Dynamics and Structure, 14th Int. Conf. on Numerical Combustion, San Antonio, Apr. 9, 2013.
- Massively parallel fluid-structure interaction simulation of blast and explosions impacting on realistic building structures with a block-structured AMR method, 8th SIAM Conference on Parallel Data Processing, Feb. 16, 2012.
- 23. Advancing dynamically adaptive algorithms for stochastic simulations on extreme scales, Minisymposium on Mathematical and Numerical Aspects of Uncertainty Quantification, 7th Int. Congress on Industrial and Applied Mathematics, Vancouver, Jul. 20, 2011.
- 24. High-resolution computational and theoretical analysis of Mach reflection structures in detonations, Minisymposium on High-order Methods for the Simulation of Detonation Evolution and Structure, *13th Int. Conf. on Numerical Combustion*, Corfu (Greece), Apr. 27, 2011.
- 25. Hybrid and dynamically adaptive higher-order shock-capturing methods for compressible gas dynamics, Minisymposium on High-Order and Adaptive Methods for PDE Simulation, *SIAM Conference on Computational Science and Engineering*, Reno, Feb. 28, 2011.
- Simulating shock-driven compressible turbulence with a hybrid adaptive scheme, Minisymposium on Advanced Method for the Simulation of Partial Differential Equations, 33rd Brazilian National Congress for Applied and Computational Mathematics, Águas de Lindóia (Brazil), Sep. 21, 2010.
- 27. Improving the parallel scaling of the block-structured mesh adaptation framework AMROC. Minisymposium on Challenges in Parallel Adaptive Mesh Refinement, *7th SIAM on Parallel Data Processing*, Seattle, Feb. 24, 2010.
- A level-set-based adaptive mesh refinement method for fully coupled shock-driven fluidstructure interaction simulation. Minisymposium on Adaptive Mesh Refinement Strategies for Simulating Large Multiphysics Multiscale Problems, *IMACS World Congress*, Athens, GA, Aug. 4, 2009.
- 29. The VTF an approach to large-scale simulation of detonation-driven fluid-structure interaction, Minisymposium on Hydrogen Flames, Fires and Explosions, *SIAM Conference on Computational Science and Engineering*, Miami, Mar. 6, 2009.
- 30. Coupled simulation of thin solid structures subjected to shock waves in liquids, Minisymposium on Techniques for Multi-Domain and Multi-Physics Problems, *SIAM Conference on Computational Science and Engineering*, Miami, Mar. 5, 2009.
- 31. Numerical simulation of multidimensional gaseous detonation waves with a parallel adaptive finite volume method, Minisymposium on Computational Challenges on Modeling Transient Detonation, *61st Annual American Physical Society Division of Fluid Dynamics Meeting*, San Antonio, Nov. 23, 2008.
- 32. Fluid-structure interaction simulation of shock wave impact on solid structures, keynote lecture in Minisymposium on Recent Advances in Numerical Methods for Hyperbolic Problems, *8th World Congress on Computational Mechanics*, Venice (Italy), Jul. 2, 2008.
- 33. Accurate simulation of transient cellular structures in gaseous detonations with an adaptive high-resolution method, Minisymposium on Adaptive Numerical Methods for Combustion Simulation, *12th Int. SIAM Conference on Numerical Combustion*, Monterey, Mar. 31, 2008.
- 34. A parallel SAMR framework for strongly driven fluid-structure interaction problems, Minisymposium on Structured Adaptive Mesh Refinement (SAMR) on Supercomputers, *6th SIAM Conf. on Parallel Data Processing*, Atlanta, Mar. 13, 2008.

- Numerical simulation of realistic detonation structures, Minisymposium on Numerical Methods for Chemically Reacting Flows, 6th Int. Congress on Industrial and Applied Mathematics, Zürich (Switzerland), Jul. 19, 2007.
- AMROC A Cartesian SAMR framework for compressible gas dynamics, Minisymposium on Integrated Software Frameworks for Advanced Scientific and Engineering Applications, SIAM Conference on Computational Science and Engineering, Costa Mesa, Feb. 22, 2007.
- 37. Simulation of supersonic combustion phenomena in evolving geometries with Cartesian upwind methods, Minisymposium on Wave Propagation Algorithms for Complex Applications, *SIAM Conference on Computational Science and Engineering*, Costa Mesa, Feb. 21, 2007.
- 38. A dynamically adaptive high resolution method for detonation simulation, Minisymposium on Recent Advances in Fixed-grid Numerical Methods for Hyperbolic Problems, *7th World Congress on Computational Mechanics*, Los Angeles, Jul. 21, 2006.
- 39. Coupled simulation of detonation-induced fracture of thin flexible shells, Minisymposium on Methods and Applications in Coupled Engineering Simulation, *7th World Congress on Computational Mechanics*, Los Angeles, Jul. 16, 2006.
- 40. Adaptive simulation of cellular detonation structures in low-pressure hydrogen-oxygen mixtures under transient conditions, Minisymposium on Flow Simulations and Algorithms on Block-structured Adaptively Refined Meshes, *11th Int. SIAM Conference on Numerical Combustion*, Granada (Spain), Apr. 24, 2006.
- 41. The Virtual Test Facility A multiphysics framework for simulating the dynamic response of materials. Minisymposium on Infrastructures for Developing Large Scale and Dynamic Computational Mechanics Applications, *8th U.S. National Congress on Computational Mechanics*, Austin, Jul. 25, 2005.
- 42. Dynamic mesh adaptation in detonation-driven fluid-structure problems, Minisymposium on Error Control and Mesh Adaptation in FEA, *3rd MIT Conference on Computational Fluid and Solid Mechanics*, Boston, Jun. 14, 2005.

Contributed talks

- 43. Non-Cartesian lattice Boltzmann methods with structured adaptive mesh refinement, *21st IMACS World Congress*, Rome, Italy, Sep. 11, 2023.
- 44. Adaptive three-dimensional simulations of rotating detonation with cooling walls, *29th Inf. Conf. on the Dynamics of Explosions and Reactive Systems*, Siheung, Korea, Jul. 25, 2023.
- 45. Design and testing of a low mass flow RDE running on ethylene-oxygen, *2nd Int. Conf. on High-Speed Vehicle Science & Technology*, Bruges, Belgium, Sep. 15, 2022.
- 46. Large eddy simulation of flow over a porous surface with a parallel and adaptive lattice Boltzmann method, *11th Int. Conf. Eng. Comp. Techn.*, Montpellier, France, Aug. 24, 2022.
- 47. A computationally efficient hybrid magnetic field correction for the magnetohydrodynamic equations, *11th Int. Conf. Eng. Comp. Techn.*, Montpellier, France, Aug. 24, 2022.
- 48. A three-dimensional solver for simulating reactive flow on curvilinear parallel adaptive meshes. *33rd Parallel CFD Int. Conf.*, Alba, Italy, May 25, 2022.
- 49. Development of an adaptive strand-Cartesian solver in 2D for non-equilibrium aerothermodynamics simulation, *2nd Int. Conf. on High-Speed Vehicle Science and Technology*, Bruges, Belgium, postponed to May 2022.

- 50. Design and testing of a small-scale laboratory rotating detonation engine running on ethyleneoxygen, AIAA 2021 Propulsion and Energy Forum, virtual event, Aug. 10, 2021.
- 51. A finite volume lattice Boltzmann method on structured non-Cartesian meshes, *9th Int. Congress on Industrial and Applied Mathematics*, Valencia, Spain, Jul. 16, 2019.
- 52. Simulating train-tunnel aerodynamics with a parallel adaptive Cartesian method. 6th Int. Conf. on Parallel, Distributed, Grid and Cloud Computing for Engineering, Pécs, Hungary, Jun. 5, 2019.
- 53. Multiscale DNS of hypersonic flow with porous wall injection. 6th Int. Conf. on Parallel, Distributed, Grid and Cloud Computing for Engineering, Pécs, Hungary, Jun. 5, 2019.
- 54. Multiresolution analysis as a criterion for improved block-based dynamic mesh adaptation using high-resolution schemes, *Int. Conf. on Spectral and Higher Order Methods*, London, UK, Jul. 12, 2018.
- 55. Application of lattice Boltzmann methods for large-eddy simulation of wind turbine rotor wake aerodynamics, *7th European Conf. on Comp. Fluid Dynamics, Glasgow, UK*, Jun. 14, 2018,
- 56. LBM-based large-eddy simulation of wind turbine rotor wake aerodynamics, *Int. Conf. Parallel Computational Fluid Dynamics*, Indianapolis, May 15, 2018.
- 57. Simulation of the flow around an oscillating cylinder with adaptive lattice Boltzmann methods. 5th Int. Conf. on Parallel, Distributed, Grid and Cloud Computing for Engineering, Pécs, Hungary, May 30, 2017.
- 58. Predictive wind turbine simulation with an adaptive lattice Boltzmann method for moving boundaries, *The Science of Making Torque from Wind (TORQUE 2016)*, Munich, Oct. 5, 2016.
- 59. Application and validation of an adaptive lattice Boltzmann method for high-resolution wind turbine wake simulation, *EUROMECH Colloquium 576 Wind Farms in Complex Terrains*, Stockholm, Jun. 10, 2016.
- Simulation of wind turbine wake interaction with an adaptive lattice Boltzmann method for moving boundaries, 68th Annual Meeting of the APS Division of Fluid Dynamics, Boston, Nov. 22, 2015.
- A dynamically adaptive lattice Boltzmann method for predicting wake phenomena in fully coupled wind engineering problems, *Coupled Problems 2015*, Venice, Italy, May 18, 2015.
- 62. An adaptive lattice Boltzmann method for predicting turbulent wake fields in wind parks, 67th Annual Meeting of the APS Division of Fluid Dynamics, San Francisco, Nov. 24, 2014.
- A massively parallel, dynamically adaptive lattice Boltzmann method for predicting wakes between wind turbines (in German), 19th DGLR-Fachsymposium der STAB, Munich, Nov. 4, 2014.
- 64. A parallel fluid-structure interaction simulation system for blast and explosion analysis. *7th M.I.T. Conference on Computational Fluid and Solid Mechanics*, Boston, Jun. 12, 2013.
- 65. A reliable split-step Fourier method for simulating the propagation of ultra-fast pulses in optical communication fibers, 8th IMACS Int. Conf. on Nonlinear Evolution Equations and Wave Phenomena: Computation and Theory, Athens (GA), Mar. 26, 2013.
- 66. Parallel FSI simulation of explosions impacting on building structures, *Int. Conf. Parallel Computational Fluid Dynamics*, Atlanta, May 22, 2012.
- 67. A reliable split-step method for the simulation of ultra-fast pulses in optical fibers, *7th Int. Congress on Industrial and Applied Mathematics*, Vancouver, Jul. 19, 2011.

- Hybrid and dynamically adaptive higher-order shock-capturing methods for compressible gas dynamics, 7th Int. Congress on Industrial and Applied Mathematics, Vancouver, Jul. 20, 2011.
- 69. Performance assessment and optimization of a block-structured adaptive mesh refinement method, *ORNL-UTK Numerical Day*, Oak Ridge, Apr. 28, 2010
- 70. A parallel adaptive method for simulating shock-induced combustion with detailed chemical kinetics in complex domains, *5th M.I.T. Conference on Computational Fluid and Solid Mechanics*, Boston, Jun. 18, 2009.
- Parallel adaptive simulation of weak and strong detonation transverse-wave detonation structures in H₂ - O₂ detonations, *21st Int. Conf. on Parallel Computational Fluid Dynamics*, Moffet Field, May 20, 2009.
- Efficient fluid-structure interaction simulation of plates subjected to underwater shock loading, Int. Workshop on Fluid-Structure Interaction: Theory, Numerics and Applications, Herrsching (Germany), Sep. 30, 2008.
- Numerical simulation of transient detonation structures in H₂ O₂ mixtures in smooth pipe bends, *21st Int. Colloquium on the Dynamics of Explosions and Reactive Systems*, Poitiers (France), Jul. 23, 2007.
- Large-scale simulation of shock- and detonation-driven fluid-structure interaction phenomena. 6th Int. Congress on Industrial and Applied Mathematics, Zürich (Switzerland), Jul. 19, 2007.
- 75. Large-scale fluid-structure interaction simulation of viscoplastic and fracturing thin shells subjected to shocks and detonations. *4th M.I.T. Conference on Computational Fluid and Solid Mechanics*, Boston, Jun. 14, 2007.
- 76. A Cartesian structured AMR framework for parallel fluid-structure interaction simulation. *Int. Conf. Parallel Computational Fluid Dynamics*, Busan (South Korea), May 16, 2006.
- 77. A Cartesian structured AMR framework for parallel fluid-structure interaction simulation. *5th SIAM Conf. on Parallel Data Processing*, San Francisco, Feb. 22, 2006.
- 78. AMROC A Cartesian structured AMR framework for distributed memory computers. *Int. Conf. Parallel Computational Fluid Dynamics*, Maryland, May 25, 2005.
- 79. Detonation structure simulation with AMROC. *High Performance Computing and Communications 2005*, Sorrento (Italy), Sep. 23, 2005.
- Towards simulation of detonation-induced thin-shell dynamics with the Virtual Test Facility. *3rd Workshop on Comp. Methods for Multidimensional Reactive Flows*, Heidelberg (Germany), Jan. 27, 2005.
- 81. High-resolution simulation of realistic detonation structures. *Tenth International Conference* on Hyperbolic Problems: Theory, Numerics, Applications, Osaka (Japan), Sep. 14, 2004.
- 82. Numerical structure analysis of regular hydrogen-oxygen detonations. *Fall Meeting of Western States Section of the Combustion Institute*, Los Angeles, Oct. 2003.
- Construction and application of an AMR algorithm for distributed memory computers. Chicago Workshop on Adaptive Mesh Refinement Methods, Sep. 4, 2003,
- 84. Numerical simulation of cellular detonation structure. 2nd Workshop on Comp. Methods for Multidimensional Reactive Flows, Heidelberg (Germany), Dec. 2002.
- 85. Numerical simulation of cellular detonation structures in detonations, 6th Workshop on Conservation Laws, Hirschegg (Austria), Sep. 2002.

- 86. Efficient simulation of multi-dimensional detonation phenomena. *ALGORITMY 2002, 16th Conf. on Scientific Computing*, Podbanske (Slovakia), Sep. 2002.
- 87. Accurate simulation of detonation phenomena. ANumE-Colloquium, Freiburg, Feb. 2002.
- 88. An AMR-algorithm for distributed memory computers. *11th GAMM-Workshop on Numerical Methods in Fluid Mechanics*, Kirchzarten (Germany), Nov. 26, 2001.
- 89. Adaptive high resolution methods for inviscid flow problems with chemical reaction. Workshop on *Computational Methods for Multidimensional Reactive Flows*, Heidelberg (Germany), Sep. 2000.
- Accurate simulation of Rayleigh-Taylor instabilities. Proc. of Colloquium on Fluid Dynamics, Prague (Czech Republic), Oct. 1999.
- 91. Adaptive simulation of inviscid gas-flows on super-computers (in German), *South-east German Colloquium on Numerical Mathematics*, Freiberg, Apr. 23, 1999.

Selected posters

- Large-eddy simulation of a high speed train geometry under cross-wind with an adaptive lattice Boltzmann method, 68th Annual Meeting of the APS Division of Fluid Dynamics, Boston, Nov 23, 2015.
- Computational sub-structure analysis of multidimensional detonation waves. DOE Office of Advanced Scientific Computing Research Applied Mathematics PI Meeting, Argonne National Laboratory, Oct 16, 2008.
- A Cartesian AMR framework for detonation- and shock-driven fluid-structure interaction simulation. DOE Office of Advanced Scientific Computing Research Applied Mathematics PI Meeting, Lawrence Livermore National Laboratory, May 24, 2007.
- 95. Accurate simulation of detonation phenomena. *Int. Conf. Dynamic Days 2002*, Heidelberg (Germany), Jul. 15-17, 2002.
- 96. Object-oriented design of an AMR-algorithm for distributed memory computers. 8th Int. Conf. on Hyperbolic Problems, Magdeburg (Germany), Feb. 2000.

Organized

- 97. Four minisymosia on Cartesian CFD Methods for Complex Applications, *9th International Congress on Industrial and Applied Mathematics*, Valencia, Spain, July 15-16, 2019.
- 98. Special session on Adaptive mesh refinement methods on parallel and distributed systems, *5th Int. Conf. on Parallel, Distributed, Grid and Cloud Computing for Engineering*, Pécs (Hungary), May 30 31, 2017.
- 99. Minisymposium on Parallel Adaptive Mesh Refinement for Complex Applications, 29th Int. Conf. on Parallel Computational Fluid Dynamics, Glasgow (Scotland), May 15 17, 2017.
- 4th OpenFOAM United Meeting, Institute of Aerodynamik and Flow Technology, DLR Göttingen, May 26 - 27, 2014 (with H. Rusche).
- 101. Minisymposium on Recent Advances in Numerical Methods for Hyperbolic Problems, 8th World Congress on Computational Mechanics, Venice (Italy), Jul. 2 - 3, 2008 (with S. Karabasov, V. Goloviznin, T. Kozubskaya, Yoko Takakura, and M. Lukakova).
- 102. Minisymposium on Adaptive Numerical Methods for Combustion Simulation, *12th Int. SIAM Conference on Numerical Combustion*, Monterey, Mar. 31 Apr. 1, 2008 (with J. Banks).

103. Minisymposium on Structured Adaptive Mesh Refinement (SAMR) on Supercomputers, 6th SIAM Conf. on Parallel Data Processing, Atlanta, Mar. 13, 2008.

Editorial board commitees

- 104. 12th Int. Conf. on Engineering Computational Technology, Prague, Czech Republic, Sep. 2024.
- 105. 11th Int. Conf. on Engineering Computational Technology, Montpellier, France, Aug. 2022.
- 106. UK Fluids Conference 2020, Southampton, UK, Sep. 2021.

Seminars and colloquia

- 107. Structured adaptive and strand mesh CFD methods in AMROC, *Institute of Fluid Dynamics* and *Technical Acoustics, Technical University Berlin*, Nov. 21, 2022.
- Adaptive high-resolution simulation of reactive high-speed flows with the AMROC framework, OpenFOAM and Combustion Simulation Webinar, *National University of Singapore*, Nov. 11, 2022.
- 109. Structured adaptive and strand mesh methods for next generation CFD, *Faculty for Aerospace Engineering, University of Stuttgart*, Oct. 12, 2021.
- 110. Recent examples of compressible aerodynamics simulation with the AMROC framework, Brazilian Institute of Space Research (INPE), São José dos Campos (Brazil), Oct. 3, 2019.
- 111. Direct numerical simulation for transpirational cooling of hypersonics boundary layers, *Department of Aerospace Engineering, Xiamen University*, Sep. 21, 2018.
- 112. Adaptive high-resolution simulation of gaseous detonation waves with AMROC, *Department* of Aerospace Engineering, Xiamen University, Sep. 17, 2018.
- Adaptive Cartesian CFD methods for fluid-structure interaction simulation The AMROC solver framework, *Department of Engineering Science, University of Oxford*, May 29, 2018.
- 114. Adaptive Cartesian CFD methods for fluid-structure interaction simulation, *Faculty of Mechanical Engineering, Brandenburg Technical University Cottbus*, Nov. 8, 2016.
- 115. Application of parallel adaptive mesh refinement in the multi-physics simulation of detonations and shock-induced combustion waves, *School of Engineering, University of Central Lancashire*, Nov. 2, 2016.
- Application and validation of an adaptive lattice Boltzmann method for wind turbine wake simulation, *Institute for Physics und Forwind for Wind Energy Research, University Oldenburg*, May 31, 2016.
- A dynamically adaptive lattice Boltzmann method for aerodynamics and wake prediction of fully coupled problems, *Engineering and the Environment, University of Southampton*, Nov. 11, 2015.
- Scalable Cartesian CFD algorithms for multi-resolution and fluid-structure interaction simulation, *Department of Mechanical Engineering, Michigan State University*, Lansing, Mar. 31, 2015.
- 119. Adaptive Cartesian CFD methods for fluid-structure interaction simulation, *Engineering and the Environment, University of Southampton*, Mar. 25, 2015.
- 120. A fluid-structure interaction system for dynamically adaptive Cartesian CFD methods, *Department of Mechanical Engineering, Virginia Tech*, Blacksburg, Dec. 1, 2014.

- 121. A dynamically adaptive lattice Boltzmann method for predicting turbulent wake fields in wind parks, *Institute for Physics und Forwind for Wind Energy Research, University Oldenburg*, Jul. 14, 2014.
- Adaptive high-resolution methods for simulating shock-induced hydrogen-air combustion, Institute for Fluid Dynamics and Technical Acoustics, Technical University Berlin, Jan. 7, 2014.
- Efficient simulation methods for compressible flows with combustion and fluid-structure interaction (in German), *Institute for Technical Mechanics, Technical University Clausthal*, Sep. 2, 2013.
- 124. Simulation of coupled fluid-structure problems with adaptive Cartesian finite-volume methods (in German). *Institute for Mathematics, Technical University Clausthal*, Jul. 25, 2013.
- Adaptive Cartesian methods for fluid-structure interaction simulation. School of Engineering and Computing Sciences, Durham University (United Kingdom), Sep. 4, 2012.
- 126. Adaptive Cartesian methods for multi-physics simulation of compressible flows. *Department* for Aerospace Engineering, University of Michigan, Ann Arbor, Apr. 2, 2012.
- Parallel adaptive Cartesian methods for shock-driven fluid-structure interaction simulation. Institute for Numerical Mathematics and Optimization, Technical University Freiberg (Germany), Mar. 19, 2012.
- Simulation of complex multiphysics problems with adaptive Cartesian finite volume methods (in German). *Centre for Simulation Technology, University of Stuttgart (Germany)*, Jan. 13, 2012.
- 129. Dynamically Adaptive Cartesian methods for shock-driven fluid-structure interaction simulation. *Southern Methodist University, Dallas*, Nov. 16, 2011.
- 130. Dynamically Adaptive Cartesian methods for shock-driven fluid-structure interaction simulation. *Department of Mathematical Sciences, University of Delaware*, Oct. 20, 2011.
- 131. Block-structured AMR algorithms for complex hyperbolic applications. Laboratory for Scientific Computing, University of Cambridge (United Kingdom), Nov. 29, 2010.
- 132. Shock-driven multiphysics simulation with a parallel adaptive embedded boundary method. Department of Mechanical, Aerospace, and Biomedical Engineering, University of Tennessee Knoxville, Jan. 21, 2010.
- 133. Parallel adaptive Cartesian upwind methods for shock-driven multiphysics simulation. *Center for Applied Scientific Computing, Lawrence Livermore National Laboratory*, Jul. 27, 2009.

- 146. Application of parallel adaptive mesh refinement for detonation structure simulation, *Rutgers University*, Piscataway, Feb. 19, 2003.
- 147. Adaptive simulation of unstable detonation phenomena, *Seminar of Applied Mathematics,* ETH Zürich (Switzerland), May 5, 2002.

Teaching

Courses

SESA6074 - Hypersonic & High Temperature Gas Dynamics (~50 students)

University of Southampton, Spring semester, 2015/16 University of Southampton, Spring semester, 2016/17 University of Southampton, Spring semester, 2017/18 University of Southampton, Spring semester, 2018/19 University of Southampton, Spring semester, 2020/21 University of Southampton, Spring semester, 2021/22 University of Southampton, Spring semester, 2022/23 University of Southampton, Spring semester, 2022/23 University of Southampton, Spring semester, 2023/24

SESA3029 - Aerothermodynamics (~250 students)

University of Southampton, Fall semester, 2016/17 University of Southampton, Fall semester, 2017/18 University of Southampton, Fall semester, 2018/19 University of Southampton, Fall semester, 2020/21 University of Southampton, Fall semester, 2021/22 University of Southampton, Fall semester, 2022/23 University of Southampton, Fall semester, 2022/23 University of Southampton, Fall semester, 2023/24

Detonation, hypersonics, aerodynamics and fluid-structure interaction simulation with AMROC

4-lecture compact course at Department of Aerospace Engineering, Xiamen University, Xiamen (China), Jul. 23-24, 2019.

Block-structured adaptive finite volume methods in C++ - The AMROC framework for parallel AMR and shock-induced combustion simulation

Compact course at Department of Aerospace Engineering, Xiamen University, Xiamen (China), Jul. 18-22, 2016.

Compact course at College of Aerospace Science and Engineering, National University of Defense Technology, Changsha (China), Jul. 26-29, 2016.

Block-structured adaptive mesh refinement in C++ - The AMROC framework for parallel AMR

Compact course at Brazilian Institute of Space Research (INPE), São José dos Campos (Brazil), Jun. 30 - Jul. 1, 2016.

Block-structured adaptive mesh refinement methods for shock-induced combustion simulation

Compact course at College of Aerospace Science and Engineering, National University of Defense Technology, Changsha (China), Mar. 17-26, 2014.

Block-structured adaptive mesh refinement methods for conservation laws - theory, implementation and application

Compact course at Joint Institute for Computational Sciences, University of Tennessee Knoxville, Jul. 25-29, 2011.

Compact course at Laboratory for Scientific Computing, Department of Physics, University of Cambridge (United Kingdom), May 4-6, 2011.

Compact course at Institute of Mathematics, Statistics and Scientific Computing, University of Campinas (Brazil), Sep. 29, 2010.

Compact course at Joint Institute for Computational Sciences, University of Tennessee Knoxville, Jul. 26-30, 2010.

Course within Summer School on Multi-Resolution Methods, Fréjus (France), Jun. 14-18, 2010.

Devised, implemented and supervised lab exercises for course *Efficient implementation of numerical algorithms in C*, Technical University Cottbus, Apr.-Sep. 2000

Postdoc supervision

D. Kashyap (University of Southampton), *Direct numerical simulation of thermal flows through complex porous media*, since Sep. 2023

P. Sharma (University of Southampton), *Direct numerical simulation of transpirational cooling through porous layers*, Sep. 2020 - Aug. 2022

M. Grondeau (University of Southampton), *Lattice Boltzmann methods develoment and large eddy simulation of flow over porous surfaces*, Nov. 2019 - Aug. 2022

R. Tan (University of Southampton), *Direct Numerical Simulation of compressible flows over rough surfaces*, Oct. 2020 - May 2022

A. Cerminara (University of Southampton), *Numerical methods develoment and direct numerical simulation of transpirational cooling under hypersonic flight conditions*, Jan. 2017 - Aug. 2019

Q. Wang (CRC stipend, Institute of Applied Physics and Computational Mathematics, Beijing), *Numerical methods for simulating turbulent hydrogen combustion and application to next-generation gas turbines*, Oct. 2017 - Oct. 2018

First supervisor of completed PhD theses

H. Peng (University of Southampton), A detailed chemistry solver on adaptive curvilinear meshes and its application to rotating detonation simulations, Oct. 2019 - Sep. 2023

C. W. C. Atkins (University of Southampton, part-time with Dstl), *A two-dimensional strand/Cartesian adaptive mesh refinement solver for automated mesh generation around hypersonic vehicles*, Oct. 2016 - Sep. 2022

J. A. Reyes Barraza (University of Southampton), *A generalised lattice Boltzmann method with block-structured adaptive mesh refinement*, Mar. 2017 - Jun. 2021

C. Gkoudesnes (University of Southampton), *Implementation and verification of LES models for SRT lattice Boltzmann methods*, Jan. 2017 - Mar. 2021

S. Wood (University Tennessee Knoxville), *Lattice Boltzmann methods for wind energy analysis*, 1st supervisor through UTK/ORNL Center for Interdisciplinary Research and Graduate Education, Sep. 2011 - Aug. 2016

Further graduate research student supervision

Ph.D. research of K. Maskey (University of Southampton), *High-fidelity simulation of atmo-spheric dispersion*, 1st supervisor, since Feb. 2020

MSc research internship of M. Lalande (Ecole Polytechnique), *Multi-scale modelling of tran*spirational wall cooling for hypersonic flows, Oct. 2021 - Jul. 2022

Graduate internships of M. M. Souza Lopes (National Institute for Space Research Brazil), *Ideal compressible magnetohydrodynamics solvers with adaptive mesh refinement*, two internships in 2017 and 2018 of 12 weeks each

Graduate internship of X. Cai (CRC stipend, National University of Defense Technology, Changsha). *High-resolution finite volume methods for simulating the exterior flow during the passage of high-speed trains*, Nov. 2014 to Sep. 2015

Ph.D. research of A. Kerr (DAAD stipend, DLR and Technical University Ilmenau). *Very large-eddy simulation of road vehicle aerodynamics using the lattice Boltzmann method*, Oct. 2014 - Jun. 2015

Graduate internship of B. Hanschke (Technical University Cottbus), *Simulation of prototypical vehicle passage problems*, autumn 2014

Ph.D. research of K. Feldhusen (DLR and Technical University Ilmenau), *Large eddy simulation of multi-physics interior flows in airplane cabins with the lattice Boltzmann method*, Feb. 2014 - Jun. 2015

Ph.D. research of N. Kin (DLR and Technical University Ilmenau), *Large eddy simulation of exterior flows around high-speed trains*, Feb. 2014 - Jun. 2015

Summer graduate internship of P. Jolivet (Université Pierre et Marie Curie, Paris), *Multi-level domain decomposition methods*, 2013

Summer graduate internship of Y. Sun (University of Michigan, Ann Arbor) Adaptive numerical simulation of boundary layer flows in shock tubes, 2012

Research Alliance in Math and Science summer graduate internship of S. Wood (Florida International University Miami), *Shock-driven fluid-structure interaction simulation with AMROC and DYNA3D*, 2011

DOE Computational Science Graduate Fellow internship of J. Ziegler (California Institute of Technology), *Direct numerical simulation of the Mach reflection phenomenon in gaseous detonation waves*, 2008

Graduate student summer internship of V. Srikrishnan, *Computational methods for implicit* geometry representation, 2007

Undergraduate and postgraduate taught student supervision

Individual project of A. Marshak (University of Southampton), *Study of Formation Mechanisms and Shock Polar Analysis of Oblique Detonation Waves (ODWs)*, fall 2023/24

Individual project of J. Ng (University of Southampton), *Rotating Detonation Engine (RDE) in more realistic 2D simulation: Optimum inflow and outflow conditions*, fall and spring 2023/24

Individual project of H. Port (University of Southampton), *Comparative analysis of flapping kinematics: A study of simulation versus experimental results*, fall and spring 2023/24

Individual project of J. Raynor and W. Ashdown (University of Southampton), *Operation to the modular detonation tube*, fall and spring 2023/24

Final year group design project (6 students), *Design and optimisation of a water-cooled miniature rotating detonation engine*, fall and spring 2023/24

MSc project of L. Efthymiou (University of Southampton), *Rotating detonation engine simulations in 2D*, fall 2022/23

Individual project of A. Kodikara (University of Southampton), *Atmospheric flows over build-ings*, fall and spring 2022/23

Individual project of C. Wheatley (University of Southampton), *Effects of viscosity on oblique detonation wave patterns*, fall and spring 2022/23

Individual project of J. Deepwell Backstein (University of Southampton), *Modifications and improvements to the modular detonation tube*, fall and spring 2022/23

Individual project of J. Harding (University of Southampton), *Aerodynamic study of individual and multiple DrivAer vehicles using the lattice Boltzmann method*, fall and spring 2022/23

Final year group design project (6 students), *Optimisation of the University of Southampton miniature rotating detonation engine*, fall and spring 2022/23

MSc project of L. Caruso (University of Southampton), *Rotating detonation engine simulations in 2D*, fall 2021/22

MSc project of L. Sanchez Gomez (University of Southampton), Aerodynamics of hyperloop transportation, fall 2021/22

Individual project of Z. Ciera (University of Southampton), *Numerical oblique detonation engine studies*, fall and spring 2021/22

Individual project of O. Fentiman (University of Southampton), *High-resolution simulation of flows over the Ahmed body*, fall and spring 2021/22

Individual project of S. Chung (University of Southampton), *Aerodynamics of a high-speed train passing by a noise barrier*, fall and spring 2021/22

Individual project of P. Mody (University of Southampton), *Simulating the aerodynamics of the DrivAer car model*, fall and spring 2021/22

Individual project of C. Jego (University of Southampton), *Investigation of the impact of the free surface on hydrofoil behaviour*, fall and spring 2021/22

MSc projects of M. Tanapubadi and R. Varma (University of Southampton), Aerodynamics of hyperloop transportation, fall 2020/21

Final year group design project (6 students), *Design, testing and simulation of a modular detonation tube*, fall and spring 2020/21

Individual project of K. Nakazawa (University of Southampton), *Simulating high speed train aerodynamics with the WENO method*, fall and spring 2020/21

Individual project of D. Edwards (University of Southampton), Aerodynamics of high speed trains in crosswind, fall and spring 2020/21

Individual project of B. Liley (University of Southampton), *Investigation of oblique detonation waves over different wedge profiles*, fall and spring 2020/21

Individual project of N. Robins (University of Southampton), CFD Analysis of olympic classes kitefoils for a dynamic model to assess the stability and controllability, fall and spring 2020/21

Individual project of A. Kumar (University of Southampton), *Designing the front wing of a Formula Student Racecar*, fall and spring 2020/21

MSc project of P. El Ghossein (University of Southampton), Accurate modelling and analysis of track cycling, spring and fall 2020

Final year group design project (6 students), *Design, testing and simulation of a miniature rotating detonation engine running on ethylene-xoygen*, fall and spring 2019/20

Individual project of E. Lee (University of Southampton), *Simulation of interacting wakes behind wind turbines*, fall and spring 2019/20

Individual project of P. Butler (University of Southampton), *Simulation of the flow around flapping insect wings*, fall and spring 2019/20

Individual project of S. Hubble (University of Southampton), *Control of a shock induced combustion front in the presence of a boundary layer*, fall and spring 2019/20

Individual project of M. N. Mohamed Nawaz (University of Southampton), *Simulating a 3D wind tunnel using CPU/GPU acceleration methods*, fall and spring 2019/20

Final year group design project (5 students), *Design, testing and simulation of a miniature rotating detonation engine running on ethylene-xoygen*, fall and spring 2018/19

Individual project of J. Bradshaw (University of Southampton), *Simulation and analysis of ho-mogeneous isotropic turbulence*, fall and spring 2018/19

Individual project of C. Gregory (University of Southampton), *Study of shock boundary layer interaction for oblique shock and detonation waves over ramps*, fall and spring 2018/19

Individual project of A. Garcia Lacunza (University of Southampton), *Study of shock boundary layer interaction for planar shock and detonation waves*, fall and spring 2018/19

Individual project of M. Pywell (University of Southampton), *CFD analysis of wings on racing motorcycles*, fall and spring 2018/19

MSc project of J. M. Garro Fernandez (University of Southampton), Aerodynamics of a highspeed train during tunnel entry and train passage, spring and fall 2018

Final year group design project (8 students), *Design and analysis of a miniature rotating detonation engine*, fall and spring 2017/18

Individual project of E. Flanagan (University of Southampton), *Programming of a virtual wind tunnel on a GPU*, fall 2017/18

Individual project of J. Bull (University of Southampton) and internship of M. Mathew (TU Delft), Modelling of flapping insect wing aerodynamics with lattice Boltzmann methods, fall 2017/18

Individual projects of M. Beckett, T. Howard, D. Wood (University of Southampton), *Modelling* of flows in nozzles in chemical and vibrational non-equilibrium, fall and spring 2017/18

Individual project of T. Guite (University of Southampton), *GPU parallelization of lattice Boltz*mann methods, spring 2016/17

Undergraduate industrial internship of J. Koradiya (TU Delft), *Simulation of car aerodynamics with AMROC*, Feb. - Apr. 2017

Individual project of A. Cox (University of Southampton), *Aerodynamics of a high-speed train entering into a tunnel*, fall and spring 2016/17

Individual project of J. Blackford (University of Southampton), *Actuator line models for wind turbine simulation*, fall and spring 2016/17

Individual project of R. Zachary (University of Southampton), Actuator disc models for wind turbine simulation, fall 2016/17

Leonardo and Erasmus+ internship of M. A. Solilo (Bronislaw Markiewicz State School of Technology and Economics Jaroslaw), *Development of a AMROC-HDF4 reader for Paraview*, autumn 2014

Summer undergraduate internship of B. Cuff (Middle Tennessee State University Murfreesboro), Summer Undergraduate Laboratory Internships, *GPU parallelization of grid-based iterative methods with CUDA*, 2012

Summer undergraduate internship of H. Oliver (North Carolina State University Raleigh), Higher Education Research Experiences, *Implementation of numerical methods for pulse propagation in dispersion-managed optical fibers*, 2011

Summer undergraduate internship of S. Wood (Florida International University Miami), through the DOE/Florida International University Science & Technology Workforce Development Initiative, *Development of verification test cases for shock-driven fluid-structure interaction simula-tion*, 2009

Summer undergraduate research fellowship of R. Rotta (Technical University Cottbus), *Efficient parallelization strategies for hierarchical AMR algorithms*, 2005

Summer undergraduate research fellowship of R. Rotta (Technical University Cottbus), *Load-balancing strategies for parallel AMR algorithms*, 2004

Diploma thesis of M. Hausdorf (Technical University Cottbus), Realization of adaptive multigrid methods for finite difference and finite volume discretization (in German), Jul. 2002 - Jan. 2003

Undergraduate research project of M. Enculescu (Technical University Cottbus), Numerical simulation of one-dimensional ZND detonations (in German), 2001

Several ancillary student projects in computational fluid dynamics, numerical methods for hyperbolic conservation laws, scientific visualization, 1999 - Jun. 2003

Graduate research student advising

G. Schomberg, graduate student of I. Hawke (University of Southampton), Modeling of radation transport, 2nd supervisor, since May. 2017

O. Parry, graduate student of E. Richardson (University of Southampton), Adaptive-fidelity turbulent combustion simulations, 2nd supervisor, Sep. 2017 - Aug. 2021

A. Gillespie, graduate student of N. Sandham (University of Southampton), Simulations of strong shock wave/boundary layer interactions, 2nd supervisor, Sep. 2017 - Jul. 2021

J. Bailey, graduate student of E. Richardson (University of Southampton), Analysis and modelling of boundary-layer flashback processes for hydrogen-rich gas-turbine combustion, 2nd supervisor, Sep. 2017 - Sep. 2021

M. Zauner, graduate student of N. Sandham (University of Southampton), Advanced linear stability analysis of transsonic flows over airfoils, 2nd supervisor, Nov. 2015 - May 2019

R. Schuster, graduate student of C. Wagner (Technical University Ilmenau and DLR) and A. Henning, Acoustic noise prediction in urban environments, Apr. 2014 - Jun. 2015

T. Köthe, graduate student of C. Wagner (Technical University Ilmenau and DLR), adjoint methods for optimization of cabin ventilation systems, Jul. 2013 - Jun. 2015

D. Jakubek, graduate student of C. Wagner (Technical University Ilmenau and DLR), adjoint methods for minimization of drag coefficients of train geometries, Jul. 2013 - Jun. 2015

C. Kath, graduate student of C. Wagner (Technical University Ilmenau and DLR), large eddy simulation of thermal convection flows in airplane cabins, Jul. 2013 - Dec. 2014

J. Ziegler, graduate student of D. I. Pullin (Graduate Aeronautical Laboratory Caltech), numerical simulation of compressible, diffusive, reactive flows with detailed chemistry with adaptive high order schemes, Jan. 2008 - Dec. 2011

J. Krimmel, graduate student of T. Colonius (Mechanical Engineering Caltech), numerical simulation of shock wave lithotripsy, Jun. 2005 - Jun. 2010

M. Lombardini, graduate student of D. I. Pullin, adaptive large-eddy simulation of shock-driven compressible turbulence, Dec. 2004 - May 2008

S. Laurence, graduate student of H. G. Hornung (Graduate Aeronautical Laboratory Caltech), numerical simulation of bodies in hypersonic flow, Jun. 2004 - Aug. 2006

C. Mouton, graduate student of H. G. Hornung, numerical simulation of three-dimensional Mach reflection phenomena, 2005

G. K. O'Reilly, graduate student of D. I. Pullin, numerical simulation of shock-vortex interaction, 2004

A. Rohde, graduate student of M. Mutz (Environmental Sciences Techn. Univ. Cottbus), simulation of porous media flow in sediment layers, 1999

PhD thesis committees

External examiner: X. Zhang (Tianjin University), Dec. 2022

External examiner: M. Patel (Imperial College London), Oct. 2022

External examiner: J. Zhao (Tianjin University), Oct. 2020

Chair and internal examiner (Aerodynamics and Flight Mechanics Research Group, University of Southamton): B. S. Soriano, (May 2019), F. Hammer (Nov. 2018), J. Leggett (Dec. 2017), J. J. Otero Perez (Apr. 2017)

K. Hogun, B. S. Soriano, B. Font Garcia (Aerodynamics and Flight Mechanics Research Group, University of Southamton)

H. Kim (Institute for Sound and Vibration Research, University of Southamton)

J. Feaster (Department for Mechanical Engineering, Virginia Polytechnic Institute and State University, Blacksburg)

University Services

Director of Research, Coordination of all research activities and proposal review for the Department of Aeronautics & Astronautics, University of Southampton, since Aug. 2021. Development and submission of a full proposal in 2023 for an EPSRC Centre for Doctoral Training in Future Space Engineering as PI. Organization and chairing of annual department research conference, chairing of annual PhD studentship, undergraduate research internship programme, annual PhD department prize committees.

Study Abroad Faculty Officer, ERASMUS exchanges for the Aeronautics & Astronautics Degree Programme, University of Southampton, Aug. 2015-Jul. 2021. Selection and set up of new university exchange partners, annual selection and tutoring of students on exchange, tutoring of incoming students, mark conversion.

Graduate student selection committee, UTK/ORNL Center for Interdisciplinary Research and Graduate Education: Feb. 2012, Feb. 2013

Affiliations

Member of Society for Industrial and Applied Mathematics (SIAM) Member of American Institute of Aeronautics and Astronautics (AIAA) Member of the American Physical Society (APS) Deutscher Hochschulverband

Software

Virtual Test Facility for simulating the dynamic response of materials http://www.vtf.website \sim 430,000 lines of code C++, C, Fortran 77, Fortran 90, \sim 27 % (largest contribution) of program text by **R. Deiterding**

AMROC - Adaptive Mesh Refinement in Object-oriented C++

http://amroc.sourceforge.net \sim 140,000 lines of code C++, C, Fortran 77, \sim 75 % of overall program text by **R. Deiterding**

Specific skills

Programming languages: C++, C, Fortran 77, Fortran 90, Pascal, Modula, Python, Basic Project organization: Mercurial, SVN, CVS, cvsview, doxygen, TWiki, HTML Parallel libraries: MPI, OpenMP, CUDA Parallel system experience: Various Linux Beowulf clusters, IBM SP2 - SP5, IBM BG/P, Compaq Q, Sun and IBM SMP systems

CFD and FEM Software: OpenFOAM, StarCCM+, DYNA3D Mesh generation: CATIA, Cubit, Ansa, CADFix, Truegrid Scientific visualization: IBM DataExplorer, Paraview, VisIt, Visual 3 Mathematical software: Matlab, Mathematica, Maple

Languages

German: native speaker English: fluent, written and spoken French: intermediate Russian: basic
